DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4, 6-8, 15, 16, and 18 are rejected under 35 U.S.C. 102(e) as being anticipated by Wong et al (6,585,555). Regarding claim 1, Wong discloses a ball comprising a core and a cover (col. 2, lines 36-40). The cover includes a thermochromic material that changes according to the temperature (abstract). Regarding claim 2, the thermochromic section is on the surface of the golf ball (abstract). Regarding claim 3, the temperature indication is visible (col. 2, lines 57-63). Regarding claim 4, the visible indication is in at least two parts, several colors are permanently displayed while one or more colors change when the temperature changes (col. 2, lines 57-63). Regarding claims 6-8, Wong discloses the thermochromic materials suitable for the invention are found in US 4,028,118, Nakasuji et al which is incorporated into the '555, Wong patent (col. 3, lines 40-45). Nakasuji discloses the thermochromic material may include liquid crystals or leuco dye. Regarding claims 15, 16, and 18, Wong discloses a ball comprising a core and a cover (col. 2, lines 36-40). The cover includes a thermochromic material that changes according to the

temperature (abstract). Wong discloses the thermochromic materials suitable for the invention are found in US 4,028,118, Nakasuji et al which is incorporated into the '555, Wong patent (col. 3, lines 40-45). Nakasuji discloses the thermochromic material may include liquid crystals or leuco dye.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 9 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wong et al. The additional cover layer is an obvious duplication of the first cover layer. One of ordinary skill in the art would have included an second cover layer to increase the durability of the ball.

Allowable Subject Matter

Claims 5, 17 and 19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 10-14 are allowed.
